1 STABILITY

2 ROUTH HURWITZ CRITERION

- 3 Compensators
- 4 Nyquist Plot
- 4.1 Polar plot
- 4.1. Sketch direct and inverse polar plots for a unity feedback system with open loop transfer function

$$G(s) = \frac{1}{s(1+s)^2} \tag{4.1.1}$$

Solution: For Unity feedback system, given the open loop transfer function

$$G(s) = \frac{1}{s(1+s)^2} \tag{4.1.2}$$

Therefore

$$|G(jw)| = \frac{1}{|jw||(1+jw)^2|}$$
 (4.1.3)

$$|G(jw)| = \frac{1}{w(1+w^2)} \tag{4.1.4}$$

and to calculate Phase of G(jw)

$$G(jw) = 1.e^{0} \cdot \frac{1}{w \cdot e^{\pi/2}} \cdot \left\{ \frac{1}{\sqrt{1^{2} + w^{2}} \cdot e^{tan^{-1}(w)}} \right\}^{2}$$
(4.1.5)

$$G(jw) = 1.e^{0}w^{-1}.e^{-\pi/2}.(1^{2} + w^{2})^{-1}.e^{-2tan^{-1}(w)}$$
(4.1.6)

$$\angle G(jw) = \frac{-\pi}{2} - 2tan^{-1}(w) \tag{4.1.7}$$

The following code plots the polar and inverse polar plots

codes/ee18btech11002/polarplot.py

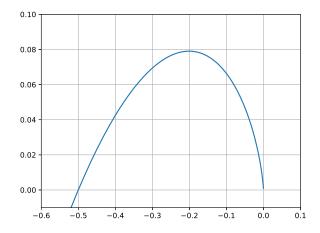

Fig. 4.1

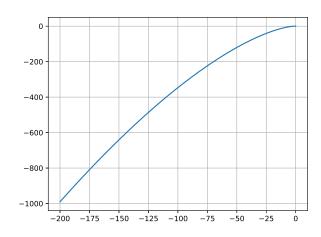

Fig. 4.1

(4.1.4) 4.2. Find the frequency at which |G(jw)| = 1 and corresponding phase angle $\angle G(jw)$

Solution: For |G(jw)| = 1

$$\frac{1}{w(1+w^2)} = 1\tag{4.2.1}$$

$$w + w^3 - 1 = 0 (4.2.2)$$

and for the corresponding phase

$$\angle G(jw) = \frac{-\pi}{2} - 2tan^{-1}(w) \tag{4.2.3}$$

The following code calculates the value of w and $\angle G(jw)$

codes/ee18btech11002/solution.py

and we get w = 0.682 and $\angle G(jw) = -\frac{52}{59}\pi$
